

## Gärtner's Compost Accelerator

- organic mineral compost accelerator
- accelerates the processing even of organic waste that is less easily biodegradable into valuable humus
- activates microorganisms, thereby promoting the composting process
- for composting suitable organic household waste: flowers, fruit residue (citrus fruit peel tends to form mould so do not use it in large amounts), vegetables, potatoes, coffee grounds and residual tea, eggshells, newspaper (only in small amounts), small animal droppings
- for composting suitable organic garden waste: plant residues (no diseased parts of plants or seed-bearing weeds), leaves, lawn, hedge or tree cuttings and also bedding, straw or sawdust
- cut large waste into pieces of about 5 cm in size in order to give the microorganisms a larger permeable surface area
- do not compost just one type of material: always mix different types
- compost weakly structured, easily biodegradable materials such as vegetable waste together with material with more complex structure that is less easily biodegradable such as tree cuttings

### Required quantities:

- any location that is 20 – 30 cm thick: scatter 100 – 250 g/m<sup>2</sup> evenly
- the quantity required depends on the biodegradability of the residual material

### Application period:

Jan	Feb	March	April	May	June	July	August	Sept	Oct	Nov	Dec
-----	-----	-------	-------	-----	------	------	--------	------	-----	-----	-----

### Tip:

- Do not use roast or steamed waste for composting in order to keep vermin away.

### Dosage of Gärtner's Compost Accelerator:

- 1 handful approx. 70 g
- 1 tablespoon approx. 20 g
