

Gärtner's granulated iron fertiliser

- granulated form means it can be spread cleanly and dust-free
- any gaps that may appear will be closed again by the rest of the lawn grass; if the gaps are larger, we would recommend reseeding the lawn
- provides garden plants with the trace nutrient iron
- for treating or preventing signs of iron deficiency (chlorosis)
- **avoid getting the fertiliser on flagstones, patio slabs, wooden flooring or clothing because this may lead to rust stains**
- **only spread in still air conditions**
- **water the lawn or garden area sufficiently after application and do not walk on it for a few days**
- **remove fertiliser residue from shoes and keep pets away**

Required quantities:

- from March to September: spread approx. 30 g/m² evenly
- 1 – 2 applications per year

Application period:

Jan	Feb	March	April	May	June	July	August	Sept	Oct	Nov	Dec
-----	-----	-------	-------	-----	------	------	--------	------	-----	-----	-----

Tips:

- Scarify regularly for a lastingly beautiful lawn.
- To keep unwanted plants such as moss out of the lawn, we would recommend spreading lawn lime regularly.
- For a luxuriant, healthy lawn we recommend a nutrient supply with Gärtner's lawn fertiliser with long-term effect.

Dosage of Gärtner's granulated iron fertiliser:

- 1 handful approx. 65 g
- 1 tablespoon approx. 30 g
