

Gärtner's lawn fertiliser with moss killer

Instructions for use:

- Gärtner's lawn fertiliser with moss killer provides your lawn with nutrients and at the same time fights moss on the lawn. Your lawn will be lush green seven days after application. The moss will turn black and die. Rake the dead moss from the lawn using a hand rake or a scarifier about two weeks after application. The fertilising effect will promote lawn growth and fill in the gaps quickly. Gärtner's lawn fertiliser with moss killer strengthens leaf colour and helps develop the lawn, thus enabling it to survive drought and stress phases more intact.

Application by non-professional users permitted. (only for pack sizes $\leq 500 \text{ m}^2$)

Areas and conditions of application as set out by the regulatory authority:

To be used on moss on lawns. Apply only in the areas of application stated in the instructions and only in accordance with the application conditions described here. Products and their residue, emptied containers or packaging and rinsing fluids must not be allowed to enter any bodies of water. This also applies to indirect entry via the sewer system, yard and street drains and rainwater and drainage channels.

Notes on user protection:

Avoid any unnecessary contact with the product. Misuse can lead to damage to health. Wear protective goggles, work clothes (at least a long-sleeved shirt and long trousers), sturdy shoes (e.g. rubber boots) and gloves when spreading/handling the product.

Notes on environmental protection:

If the product is applied as set out in the approval, bees will not be harmed (B3). The product has been categorised as not harmful to populations of relevant beneficial insects. The product has been categorised as not harmful to populations of relevant predatory mites and spiders.

Gärtner's lawn fertiliser with moss killer

Use of the product in or in direct proximity to surface water or coastal waters is not permitted (Section 12 Paragraph 2 German Plant Protection Act, PflSchG). Independently of this, the binding minimum distance from surface waters as prescribed by state legislation must also be maintained. Infringements may incur a fine of up to € 50,000. Do not allow products and/or their containers to get into bodies of water. (Do not clean spreaders in direct proximity to surface waters. Prevent indirect entry via yard and street drains.)

Other notes:

Damage to cultivated area possible. No more than 2 applications per cultivated area and vegetation period. The product does not have a long-term effect against persistent weeds. Classification of the active ingredient in accordance with the Herbicide Resistance Action Committee (HRAC): Effect mechanism (HRAC GROUP): Z

Notes on application:

For eliminating types of moss on lawns

- Area of application: home gardens and allotments: open land
- Type of application: spreading, only with portable appliances
- Required quantity: 35 g/m²
- Application period: during the vegetation period, spring and autumn. Do not use in the seeding year.
- A maximum of 2 applications per year with 90 days between them.
- Waiting periods (open land, lawn): There is no fixed waiting period (N).

What types of moss does Gärtner's lawn fertiliser with moss killer eliminate?

The product has a wide-ranging effect due to its burning effect, which dries the moss. It eliminates the most varied types of mosses, especially those typically found on lawns:

It is very good at eliminating typical lawn mosses such as:

sphagnum spp, brachythecium rutabulum, brachythecium albicans, mnum hornum.

Sufficiently effective against: polytrichum commune, hypnum lacunosum

Insufficiently effective against: polytrichum piliferum, barbula recurvirostra

Gärtner's lawn fertiliser with moss killer

Only use the product in accordance with the instructions for use.

How does application work?

Do not mow the lawn 2 – 3 days before application.

We would recommend the use of a garden spreader to ensure even spreading. Please observe the walking speed of 1 m per second. If spreading by hand: in order to imagine the right amount, start by spreading the appropriate amount on a small, measured area, preferably in half the required quantity once lengthwise and once crosswise. If you adhere to the recommended quantity there is no risk of burns.

Garden spreader settings:

Appliance:	Setting:
SUBSTRAL EvenGreen Universal Box Spreader	4.5
SUBSTRAL EasyGreen Universal Centrifugal Broadcast Spreader	26.5
Gardena Classic Spreader 300	4 (1 lengthwise, 1 crosswise)
Gardena Classic Spreader 500	2
Gardena Classic Spreader 800	2
Gardena 410, 415, 425	5
Wolf WE 250, 251, 252	3.5 (1 lengthwise, 1 crosswise)
Wolf WE 430	9

For other garden spreaders please ask the manufacturer

When and where should the lawn fertiliser with moss killer be used?

Use the product in frost-free, friendly weather. The ground should be damp and the grass dry. Do not use during a rainy period, longer drought periods or frost.

Gärtner's lawn fertiliser with moss killer

What do you need to look out for with application?

Water the area 2 days after application if it has not rained in the meantime. This activates the fertiliser. Do not mow again until at least 4 days after application. After 10 – 14 days, use a scarifier or rake to remove dead moss and any that has turned brown-black in colour. Any discolorations of the lawn are temporary. If there is heavy or recurring moss, application can be repeated after 90 days. Do not use in the seeding year! Do not use on a weakened lawn (e.g. in a drought) and water before application if necessary.

General notes:

Keep children and pets away from treated areas until the lawn fertiliser has been absorbed into the soil by rain or watering. The lawn should not be walked on until it has rained or the lawn has been watered because the active ingredient iron sulphate causes patches of rust. Take care with paving stones: the active ingredient iron sulphate causes patches of rust. If spread accidentally onto paving stones, natural stones, concrete blocks etc., gather it up immediately while dry and place in a sealable container. Wear protective gloves and spread product residue in accordance with the application rules or dispose of or have it disposed of properly.

Gärtner's lawn fertiliser with moss killer

In accordance with the Fertiliser Regulation:

EC FERTILISER

NK fertiliser, 14+5, with iron (Fe)

For horticultural use.

14.0 % N (total nitrogen)

10.9 % N (ammonium nitrogen)

3.1 % N (carbamide nitrogen)

5.0 % K₂O (water-soluble potassium oxide)

6.0 % Fe (iron)

3.0 % Fe (water-soluble iron)

Net content: 5 kg

Manufacturer: gpi green partners international GmbH & Co. KG, Rockwoolstr. 14, D-45966 Gladbeck

First aid: take off contaminated clothes and wash before using again. Wash affected areas immediately after contact with skin. After contact with the eyes rinse immediately with plenty of water for several minutes, including under the eyelids. If complaints persist, consult a physician. If you have swallowed any product, rinse your mouth out with water. Do not induce vomiting. Consult a physician immediately and present the packaging or label.

Storage: store in a cool, dry place in the original packaging. Protect from frost. Store away from children and pets. Since the use of this product is outside our influence, we assume responsibility only for consistent quality.

Disposal: do not dispose of old stock and residue with household waste and do not flush it down the toilet or pour into the sewer system. Take to a hazardous waste collector.

Batch number and date of manufacture: see packaging
