

Gärtner's lawn reseeding and renewal mixture

- Quality mixture with tested, high-quality lawn grasses, ideal for renewing and improving existing lawn areas
- Helps dense lawn formation, is low maintenance, extremely robust, resistant to dry conditions and regenerates well.

Instructions for sowing and care:

- Before sowing the seedbed should be prepared thoroughly. Mow lawn areas low, below 0.5 cm, scarify the area lengthwise and crosswise, rake thoroughly and remove plant residue and anything else.
- Spread the mixed seed evenly. To obtain a uniformly thick lawn, always sow in two working steps, both lengthwise and crosswise. A mixture of the seed with the same amount of dry sand has proved effective. This enables better dosage and makes it easier to spread. Then roll or tread down the area that has been sown. Sowing should take place ideally from March to May or August until the end of September.
- Water regularly and thoroughly with a fine jet in the mornings and evenings. The first step should be to cut the grass from approx. 8 cm down to approx. 4 cm. Afterwards, mow regularly, but no lower than 3 cm. To maintain the nutrient supply, spread 30 g/m² of Gärtner's lawn fertiliser with long-term effect once or twice by the end of September. Application should depend on the rate of growth and frequency of mowing..

Application period:

Jan	Feb	March	April	May	June	July	August	Sept	Oct	Nov	Dec
