

Gärtner's olive tree fertiliser

- for regular nutrient supply of olive trees outside the sun-kissed Mediterranean region
- supports strong and lasting growth, especially with trees planted in tubs
- promotes healthy roots and good bud clusters
- spread evenly around the olive trees and work gently into the soil

Required quantities:

- Cutting roots are very sensitive, so do not fertilise them
- We recommend fertilising from the age of 2 years:
 - 1st dose: in spring (March/April), spread 100 g/m² evenly around the olive tree and work gently into the soil
 - 2nd dose: 8-9 weeks after the first fertilisation spread 100 g/m² evenly around the olive tree and work gently into the soil
- Do not fertilise during the winter months

Application period:

Jan	Feb	March	April	May	June	July	August	Sept	Oct	Nov	Dec
-----	-----	-------	-------	-----	------	------	--------	------	-----	-----	-----

Tips:

- Get your olive tree slowly used to direct sunlight after sheltering during winter and place it in partial shade in the first two weeks. Otherwise leaf burning may occur.
- Roots react sensitively to waterlogging, so water with care.

Dosage of Gärtner's olive tree fertiliser:

- 1 handful approx. 50 g
- 1 tablespoon approx. 20 g
